The RM33 is a creasing machine with various options to enable different processes. For creasing it uses two widths to enable various thickness of stocks to be processed. Each setting can be set in no time without having to remove any covers.

Creasing (Standard Machine)

The resultant “crease” is perfect for digital stock that would normally suffer from cracking when scored by a rotary blade.

The dual scale back guide and the 45° and 90° side lay guide (shown in the picture opposite) ensure the highest degree of accuracy when using this machine in any mode.

Perforating and Slitting

The Perforating kit is an extra. It contains two lengths of perforating rule, 21.5cms and 15cm, along with a fitting kit. Perforating rule is available in two pitches, Fine and Medium.

The longer rule can be mounted centrally for perforating full width across an A4 sheet. For stop or corner perforating the shorter rule can be fitted to one side of the machine giving maximum flexibility.

Slitting blades can also be used on the RM33 as full width or cut to any size. By using the unique side alignment guide slitting or perforating can be set at any angle.

Thumb Cutting

The modular RM33 can be quickly set to punch thumb cuts for Calendars and Index tabs. The tool punches a standard 20mm diameter thumb cut.

Three machines in one - Versatility with a small footprint!

Basic Machine

- Maximum Width 330mm
- 2 Creasing Widths as standard (1.2mm & 1.8mm)
- Dual Scaled Parallel Back Lay
- Side Lay with setting for 45° and 90° angles
- Self returning operation Lever

Weights & Measures

- Dimensions 420 x 420 x 120 mm (without lever)
- Weight 10 kilos

Optional Modules

- Stepped Alignment Guide
- Perforation Tool Set
- Thumb Cut Tool Set
- Counter (4 Digits and Reset)
