No Dies Required

No Make-ready

Digital Controls

No Skilled Operator

The Perfect Solution for Proofs, Short Run Jobs and Personalisation

The FoilTech FT-12 is the latest in the range of foil fusing machines from Caslon Limited. This hand fed model incorporates a fully digital control panel for accurate setting of both temperature and speed, thereby ensuring that any repeat job can be simply and quickly re-established.

It couldn't be simpler; just print an image on your laser printer, set the desired temperature and speed using the digital controls, start the machine running, engage the impression lever and begin to create inexpensive, foiled images that can command a high retail price in today's market place.

The machine will accept sheets up to 340mm wide and of any length. As it foils from a toner image there is no requirement for a negative or an expensive metal die. No special make-ready supplies, training or skills are needed to produce beautiful flat foil stamping with either the FT-12 or any other FoilTech model.

FoilTech Foil is available in a range of different colours and effects, including wallpaper holograms. Rolls are available at 300mm wide or specific widths can be cut to size. To really increase profits, consider our Foil Cutter and never waste another centimetre of foil.

The FT-12 is just one model in Caslon's extensive range of digital foiling machines. Be sure to check out the full range to ensure you have chosen the right model for you and your business.
