- ◆ Rolls on a micro thin coating
- ◆ Stays repositionable for up to two minutes
- ◆ Bond will not be affected by heat, humidity or ageing
- ◆ Acid free and non toxic
- ◆ Fast - coats at 16 seconds per metre
- ◆ Dries to a permanent bond within ten minutes

The Rollataq Adhesive system has a unique adhesive which is ideally suited to a range of applications such as mounting photos, posters and artwork; making greeting cards and invitations; adhering labels as well as making jigsaw puzzles !

The system combines a motorised roller coater, or hand applicator, with the Rollataq cold adhesive to provide many benefits to today's artists and printers.

The cold adhesive is acid free, non toxic and delivers the smoothest, most even coating whilst still providing the strongest adhesion possible.

It will not soak through thin papers and will not yellow over time. It stays fresh in the coater for a long time, thereby eliminating daily cleanup.

The hand applicator is available in 55mm width whilst the motorised units are available in two sizes; 622mm wide and 927mm wide.

The Rollataq adhesive is available in three different container sizes; 0.47 litres, 0.94 litres and 3.8 litres.

**Note:** One of the surfaces must be porous to get a permanent bond.

For example, a photo paper that is non porous can be mounted to foamboard, matte board, paper or cardboard which are all porous, but not to plastic.

If you are mounting a print with a porous surface, it will stick to all porous and non porous surfaces including plastic, wood and metal.
