- ***Stand alone system***
- ***51 and 76.2cm widths available***
- ***Bespoke infeed / outfeeds available by design.***

A stand alone powdering section applies powders to various substrate materials. This type of equipment is most commonly used in the heat transfer industry.

The photo above shows the 50.8cm wide Stand Alone Powder System. A 76.2cm wide model is also available.

All Stand Alone Powder Systems include a powder hopper with a micro adjusted, dual stream discharge. Excess powder is vacuumed off the substrate and recycled into the powder hopper. Conveyor speed, vacuum strength, powder flow and the vacuum clearance gap can all be easily adjusted by the operator as required.

Various infeed and outfeed conveyor configurations are available to meet specific customer requirements.
