Wax coating systems are great for Paste up, stenciling, mounting artwork or presentations to the wall. It provides a strong but removable bond that never dries out. It can be mounted and re-mounted at any time, even years later. The harder you rub it down, the stronger the adhesion. Wax is dry to the touch the second you coat the material. Acid free, nontoxic and odor free. Will not damage walls or other substrates.

The Procote handwaxer warms up then rolls on a 3" wide wax coating, twice as wide as other brands. The automatic temperature control insures wax will not overheat or bleed through. (Each machine comes with 10oz. **Prostik wax** and holding stand)

Speedcote desktop machines (12" & 18") are fully automatic. They warm up in only 16 minutes. There are no dials or adjustments to made on a regular basis.

Simply turn on the motor switch, feed the material into the turning rollers and in no more than a second you see solid micro thin wax coating.

The precision temperature control insures perfect coating and no bleed through.
